DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-7 are rejected under 35 U.S.C. 102(b) as being anticipated by Nakamura et al. US # 6,333,578.

Nakamura et al. teach the limitations of the independent claim 1 and claims 2 and 3 in Fig. 1a, wherein Nakamura et al. show at least two separate windings for each phase of stator-winding and wherein the opposite ends of windings serve as terminals to be selectively connected with one another. The power supply is presented in form of amplifier 1, in Fig. 3. See col. 1, lines 10-67, col. 2, lines 1-23, col. 3, lines 21-61, col. 4, lines 60-67.

With respect to claims 2-5, Nakamura et al. teach in Fig. 3 a motor 3 having a terminal block for connection of opposite ends of the separated windings. The selective connection of end terminals of separated windings to the power source (amplifier 1) is provided via connector units in form of contactors MCC1-MCC5. Nakamura et al. disclosed that different output speed and torque characteristics could be obtained via above presented connections. Wherein the motor windings can be selectively connected in delta or star configuration, to provide large torque-low speed or low speed

or medium low speed or medium-high speed motor output characteristics, (see col. 5, lines 1-67).

With respect to claims 6 and 7 claimed connecting units have automatically operated selector switches. As stated above Nakamura et al. disclosed the MCC1-MCC5 contactors. Wherein the presence of automatic switching contacts is inherent.
